

It's your choice at Anton's

We follow clothing manufacturer recommendations in selecting the correct cleaning process. We take into account the care label instructions, Drycleaning & Laundry Institute formerly (International Fabricare Institute) advisories, our extensive experience and customer requests.

Anton's wetcleans garments we determine to be best suited for this process. Today, we wetclean more than 50% of all garments. Just let us know if you would like us to wetclean your garments.

The traditional process is "dry" cleaning—which is not "dry" at all. As a Sanitone® Certified

Master Drycleaner, Anton's, the largest clothing care company in the Northeast, uses the industry's premier cleaning process to provide the highest level of cleaning quality. Sanitone products are made using natural renewable resources.

We use Sanitone® products for laundering shirts as well as wetcleaning.

We are committed to providing the best care for your garments, employees and the environment.

Cleaning industry leadership

Environmental responsibility has long been a top priority at our company. During the past three decades, we have been recognized by government agencies (*US EPA, Massachusetts DEP, Massachusetts Toxic Use Reduction Institute*), the drycleaning industry (*Drycleaning & Laundry Institute, North East Fabricare Institute*) and by outside groups (*University Leaders for a Sustainable Future, Massachusetts Business Environmental Network*) as a leader in drycleaning industry environmental issues.

EcoClean Clothing Care™ continues our total commitment by providing a safe environment for our customers, employees and the community.

Anton's Cleaners chooses to be environmentally accountable. Our customers, employees and the communities where we operate can have full confidence that the company's commitment to environmental excellence is real, continuous and unwavering.

Clothing Care excellence Environmental responsibility

www.antons.com

The best in clothing care

- Control of cleaning process with state-of-the-art cleaning equipment
- Consistent quality through employee training and performance standards
- Clothing care excellence and environmental responsibility

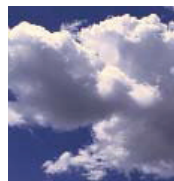

We want you to be 100% satisfied with the way we work, as well as the quality of our work.

Printed on recycled paper made from pulp harvested from managed forests.

Our environmental commitment

Anton's Cleaners has long made environmental quality a top priority. Our goal is to exceed your expectations when it comes to the environment, just as we do when we clean and finish your clothes.

We've taken the lead in providing a safe environment for our customers, employees and the community. Our commitment is reflected in our work with the cleaning industry, regulatory agencies and others to make certain our equipment, products and processes adhere to recognized environmental standards.

Our environmental program

Environmentally responsible cleaning personnel

Environmentally safe drycleaning requires extensive knowledge and proper training. Anton's Cleaners is committed to both. Our people receive continuous training to meet the company's rigorous cleaning performance standards.

A constantly evolving cleaning process

Our equipment replacement plan is based on an ongoing process of analyzing and researching environmentally friendly alternative drycleaning fluids. This continuing program has included the installation of multiple Green Earth™ and/or EcoSolv® fluid drycleaning machines.

At Anton's, we follow clothing manufacturer recommendations in selecting the best cleaning process. We wetclean more than 50% of all garments.

Our drycleaning and wetcleaning equipment is computer controlled for maximum efficiency and has helped reduce drycleaning fluid consumption by 90% over the last 20 years, as well as water consumption by 50%.

Our drycleaning equipment uses a sophisticated distillation process that recycles drycleaning fluids to provide totally clean drycleaning fluid for each load.

A continuous recycling program

Long before recycling became an environmental necessity, Anton's Cleaners led the way. Today we're still out in front.

There's an Eco-Clean® Recycling Center in every store

Wire hangers

We make it easy to return wire hangers. You can drop them off at the Recycling Center in your nearest Anton's store. And be sure to pick-up a free hanger caddy, which will keep your used wire hangers neat, organized and be just what you need to take them back to the store.

Plastic

Along with wire hangers, we also recycle the plastic used to cover your clothes. We urge you to collect it and take it to the Eco-Clean Recycling Center at your Anton's store. Plastic goes to a recycling company, not a landfill.

Recycling of drycleaning fluids waste

In 1982, Anton's was the first cleaner in the U.S. to recycle drycleaning fluids waste, not just dispose of it.

Using a sophisticated distillation process, we recycle drycleaning fluids. We are one of a very few cleaners to use totally clean fluids for every load of clothes. This is why your clean clothes are completely odor free when cleaned at Anton's. Other cleaners may "filter" drycleaning fluids or use the same fluids repeatedly.

We take recycling seriously because it's part of Anton's culture.
